Thanks for the answer. I tried the READ_ASCII procedure but the it can't recognise the STRING variable. This is what I get...

```
{ NaN    0.386216    1286.08  
  NaN    0.391236    1080.36 }
```

Using an ASCII_TEMPLATE solves this problem by defining the data types. However, when I use the structure data (created above) as a template doesn't work.

So is there a way to somehow define this template not interactively?

Thanks!
Tas
