```

Well, now, this is VERY odd. :-)

OK, let's try this. Let's open \_IDLITCONTAINER up and \*see\* if it has a PROXY keyword on the SetProperty method.

```
IDL> .edit _IDLitContainer__Define
```

This should open the file in the editor. Is it the right file?

Located in C:\Program Files\ITT\IDL81\lib\itools\framework\?

Find the SetProperty method. Do you see a PROXY keyword?

Compile it. Try the code above again. What happens now?

Cheers,

David
