Brian J. Daniel writes:

> I'm in the habit of being agnostic to the working directory of IDL by supplying absolute paths for my inputs and outputs. I'm trying to programmatically save figures from a cgWindow display and I'm specifying an absolute path to cgControl, Create_PNG=MyAbsolutePath. cgWindow promptly ignores my absolute path and saves to my working directory with the same filename specified in MyAbsolutePath. Is this by design or am I using it incorrectly?

I think it is because you are not using the latest version of cgWindow. :-)

Cheers,

David
