
Subject: XYOUTS character size strangeness

Try this immediately after starting IDL:

```
xyouts,0,0,'Hello',/normal  
plot,[0],noerase  
xyouts,0,0,'Hello',/normal
```

On my SGI box, the second 'Hello' is printed significantly larger than the first. Anyone know why?

(On a Sun box, the size of 'Hello' stays the same).

Cheers,
Liam.
