
Subject: external string EXP for MATH_DOIT (ENVI)

Hi all,

even if this is a problem related to ENVI I was wondering if perhaps someone had already similar experience on this topic:

I'm trying to give as string expression for MATH_DOIT a string that has to be read from a metadata file (.txt).

I'm able to extract the string to be passed and when I give it as input for the EXP keyword it seems to create the image.

But when I try opening it I got the following error

Error: "POLY_2D: String expression not allowed in this context: ARR."

The result may be invalid

Does somebody know any workaround for this error??

thanks a lot
