Hi Robin,

You can use a combination of REBIN and TRANSPOSE to do this. The following should work for you:

```
nElements = 5
```

```
nCols = 4
```

```
test = INDGEN(nElements)
```

```
print, test
```

```
  0    1    2    3    4
```

```
print, REBIN(TRANSPOSE(test), nCols, nElements)
```

```
  0    0    0    0
```

```
  1    1    1    1
```

```
  2    2    2    2
```

```
  3    3    3    3
```

```
  4    4    4    4
```

Regards,

David
