Hi everyone,
I have a contour plot (y axis is ocean depth, x axis is time and
temperature of the water column is contoured)   in which i have 123
irregular time(data) points. I want to read in column data (which is
no problem) from a file :
09 09 2002
09 17 2002
... ...
... ...
12 23 2005 etc... I want to read these columns as month, day ,year
seperately and then generate time labels for the x axis of my plot
such as : 09/09/2002 .

There is no regular spacing in between the dates, which is what i
could not figure out.
I want to have tickmarks on each date(data point), so my plot will be
easy to follow.
