Dear All,

I just had a new trouble after a new update of Mac OS (more a Java Update I believe)

I had an error when opening IDL 7.1 saying that the JAVA virtual machine was not found.

This time it was quite easy to correct :

Open a Terminal and do :

```
sudo ln -s /System/Library/Frameworks/JavaVM.framework/Versions/Current JDK  
/System/Library/Frameworks/JavaVM.framework/Versions/1.5.0
```

I'm sure most of user will find it easily anyway.

Vincent
