In case anyone is interested, I've posted an article that shows how to use Slither (<http://slither4idl.com>) to embed PyMOL (<http://pymol.org>) in an IDL window.

<http://research.jacquette.com/using-slither-to-embed-pymol-in-idl-applications/>

The same technique could be used together with PyOpenGL to do raw open drawing in an IDL window, or, without Slither, to allow a custom dlm to do opengl drawing.
