Greetings all,

I need to make mpeg movies from PV~Wave. I'm assuming I'll have to export files as 2d images and combine them. Questions are...

1) is there an easier way to do it from an array of movie frames

2) what's a good freeware mpeg encoder (better still with where to get it). I'll need a SPARC Solaris version, though a SunOS one might work under binary compatibility...

Thanks, Pete.
