Subject: write .cat file
Posted by Maryam Tabatabaei on Tue, 22 May 2012 22:11:12 GMT

Hi,

I have 20 vectors of different lengths and I wanted to print them to a
" *.cat " file.
I tried "forprint" but since my vectors more than 18 and at different
length, the resultant output was not what I was looking for.
I think I need to use "openw, printf, close ", but I do not know how
to format "printf" such that it would have 20 columns of different
lengths, spaced by a tab.

Could somebody help me on this please?

Thanks
