Subject: Calling IDL from C language: sunmath problem.
Posted by Alessandro Parisi on Fri, 31 Jan 1997 08:00:00 GMT

Hi to everybody.

We have seen that the IDL callable functions, released with IDL package (Ver. 4.0.1), allow to call IDL from a program written in C language (routines are: IDL_ExecuteStr and IDL_Execute).

We have compiled the program with "gcc" and there are problems (at link time) since the library "sunmath" is not found.

Questions:

1- Do we need exactly this library or we can arrange in same way to use another library ?

2- Could somebody confirm that the gcc is OK for that ?

3- Do you know where to find other information about that ?
   (possibly on the WEB)

By.

P.S.: we are not using "rpc" .
