Hello,

I did a plot like that

```
ps_start, file=filename  
datacolor1=cgcolor("Red",!D.table_size-4)
```

```
multiplot,[1,2]  
plot, vector1, ytitle='F', xstyle=1  
oplot, vector2, color=datacolor1
```

```
multiplot  
plot, vector1, xtitle='v[km/s]', xstyle=1  
oplot, vector2,color=datacolor1
```

```
multiplot,/reset  
ps_end
```

but I cannot see the red line on the ps, while I can see when I use x.
How do I get color in ps?

thank you
