Hi all

In my code, I am matching two string arrays, and print the matched indices and strings of those indices in a file.

To read the file, I am creating a structure and name everything but I think my structure is wrong because I end up with a EOF error!

When I also print the first line of my file, it looks ridiculous!

PLEASE HELP ME!!!!

```
openw,4,'matchingClusters.dat'  
for i = 0,479 do for j=0,41 do  
if(strmatch(matched_with_clusters(i),clusterID(j)) eq 1 ) then printf,  
4, i,matched_with_clusters(i),j,clusterID(j) , format =  
'(I10 ,A10,I10 ,A10)'
```

```
free_lun,4
```

```
;; this piece of code enables you to access to the different columns  
;; of matchingClusters.dat file.
```

```
dataStruct = {fieldINDEX:0.0, fieldNAME:"", clusterINDEX:0.0,  
clusterNAME:""}  
file = 'matchingClusters.dat'  
nrows = file_lines(file)  
cluster = replicate(dataStruct,nrows)  
openr,4,file  
readf,4,cluster
```

```
;;; BAM! THE ERROR HAPPENS RIGHT HERE
```
