If you want to record the sequences, the tricky part is to deal with their variable lengths. If you're using 8.x, you could try putting them in a list:

sequence=list()

then...
sequence.add,where(ss[i] eq amp)

print,sequence[i]

Or the older way was to use an array of pointers:

sequence=ptrarr(n_elements(ss))

...
sequence[i]=ptr_new(where(ss[i] eq amp))

print,*sequence[i]
