Hi guys,

Thank you for your interest and your help. You are right when you say that the model is not very good. I also tried different things and none of my fits are very good.

I changed the 3th coefficient using the following expression:  $(1-P[1]-2*ZMAX*P[2])/(3*ZMAX^2)$

I've got a good result using ZMAX=100 but, in my study, ZMAX=100 is almost impossible so I started looking at the problem differently. Anyway, I did a lot of things during these last 2 days and I think that I don't need the fit anymore.

Thank you for your help. I really appreciate your replies,  
natha
