Subject: Copy from an hdf file to another

I´ve got a lot of hdf files, they´re like a big matrix organized in latitudes and longitudes, and each cell/pixel is a value of temperature.

I´ve chosen a region of interest and what I want to do is to create a list of new hdf files organized like the originals, but smaller, it should contain not the whole original matrix but only my region of interest.

So how can I copy the information I need from an hdf file to another?
