Subject: WHERE routine

Posted by ska1 on Wed, 27 Jun 2012 23:48:04 GMT

Hi,

I'm trying to get a bunch of my IDL code to work with GDL (on RHEL).
I have encountered that GDL (version 0.9.2) does not recognize the WHERE routine. Am I
missing a GDL library? Any advice on how to get around this?

for example, this line no longer works...
DOYcol = where(stregex(Header[*],'^DOY$', /fold_case, /boolean), count)

thanks,
Karen
