Subject: Matching elements in two arrays of different sizes Posted by Meredith Pind on Tue, 26 Jun 2012 16:07:29 GMT

Hi everyone,

I am having trouble figuring out how to search through an array of size [1,17824] and match it to the points in another array of size [1,70].

What I am trying to use to match the two arrays are the month, day, year, hour, and minute within each dataset. I have made two arrays using julday and have been trying to go through each of those arrays to find matches. However, it only searches up to the 70 first lines of the larger array and dosen't give all the possible matches.

Any ideas on how to fix this would be helpful.

Cheers,

Meredith
