
Subject: byteoder for float numbers conversion

I want to convert the float numbers from UNIX format(big-edian) to PC format(small-edian). For example, I have a float array data(420)

None of these commands worked:
byteorder, data
byteorder, data, /xdrtof
byteorder, data, /ftoxdrt

I can write the C program to do it but my file is the IDL structure so I like to solve this problem in IDL too.

Thanks.

P.S: Does anybody has the IDL program drawing topographic map for EEG(ERP) data? Thanks a lot.
