OK, a little coffee helped.

Here is what I have done. I now save the root name and output directory of the last file you have output in cgWindow. All subsequent output commands construct their default filename from the *last* filename output. This will keep you in the same output directory and make it easier to choose your own names.

You can find the updated program here:

http://www.idlcoyote.com/programs/cgcmdwindow__define.pro

Let me know what you think.

Cheers,

David
