Hi Mike,
generating a sqlite database is pretty straightforward, I did all using a small piece of python and no experience.
If there is sqlite on a machine there is no problem to create the docSet.dsidx via IDL or generate a ASCII file with to be ingested in sqlite.

Cheers,
Mario.

PS: Will you be at the IDL User Group Meeting in Boulder in September? I'll be in Boulder, but I don't know if I'll have time for the meeting...
