Subject: Re: Problems with IDL 8.1: the Development Enviroment is not starting
Posted by kidpix on Wed, 12 Sep 2012 12:56:42 GMT

Hi,
I didn't want to loose all my personalization, so I traced back where the Diff view is called in the idlde startup. It was in the file:

 /Users/[my_user]/IDLWorkspace81/.metadata/.plugins/org.eclip se.ui.workbench/workbench.xml

precisely, I erased the lines (it depends on the organization of your workbench):

<view id="org.eclipse.help.ui.HelpView" partName="Help">
<viewState BrowserPart.url=" /org.eclipse.team.svn.help/gettingStarted/subversion/svn_dif fs.html
" pageId="browser-page"/>
</view>

Than it started as normal, warning that one file was modified out on the SVN control, a re-sync to my repository and all back to normal.

Cheers!

PS: It was my fault, I modified a file remotely using vim!
