
Subject: Is MAP procedure in IDL8.2 BROKEN?

Hi all,

I'm experiencing the following strange behavior of my IDL 8.2:

If I would like to use the MAP procedure opening only IDL 8.2 it gives to me a syntax error (even when I'm using the example from IDL guide).

But if I open ENVI+IDL (classic) then the procedure is compiled without problem.

Is anybody facing the same problem??

thanks in advance
