I have a very simple question that I am having trouble finding an answer to. It is related to this post however. I have a contour map with defined contours in log scale. that go from -4 to 4. I want to make a colorbar to go with it. However, putting the min range = -4 and the max range = 4 and setting /log or /ylog gives me a colorbar that stays positive. Any thoughts? Is there an easy way to do this, or do I have to create a positive and negative colorbar next to each other? Erik
