I've been using Exceed for several years with IDL, and
I've been very happy with it. I've used it on a variety of PC's
(486 and up), with IDL running on a variety of Sun workstations.
I haven't found anything that doesn't work. The only problems I've
had are colormap problems - sometimes I get stuck with a black and
white colormap even if I've chosen another one.
