Hello,

I am trying to use a IDL on a different machine. I logged on to the other machine using putty and type in 'idl'. But I don't know how to write or compile the program using linux based command line.

I have been using IDL on my windows computer so don't have any idea how to run or compile or edit the programs. I had used 'idlde' on a different server before but not on a command line.

Thanks,

Mahesh
