I've been looking for a manual for the new envi API and haven't been able to find one. The only thing I see are the help pages but for me, they are better for looking up syntax and keywords than trying to get an overview of the various options available for each new class.

To help me learn the new API, I took all the HTML help pages, converted them to PDF and then put them into a rough order (i.e. classes followed by methods). The file is at:

https://dl.dropbox.com/u/7103771/envi_newapi_manual.pdf

M

P.S. The program to do the conversion is wkhtmltopdf (<http://code.google.com/p/wkhtmltopdf/>)
