Dear all,

I tried to use WHERE for multiple comparisons of two arrays.

Here is a minimal example:

1.) Two arrays

A=[1,3,2,5,2,6,1,9]

B=[1,5]

2.) I need to extract all positions of A where any of the values from B occur in A. So that C should look like this:

C=[0,3,6]

So far I tested

C=WHERE(A EQ B) but this doesn't work.

Any ideas how to solve that without looping over B?
