Hi everyone.

I was just wondering if anyone can guide me in using meanclip.pro? I'm am an IDL beginner and the online documentation is sparse.. (I don't get it)

I have a double array of 2 columns and 1439 rows.

I'd like to use this program to clip data that is a certain amount of sigma away from the last value and then plot it. I am also using the Poly fit routine if this is relevant.

Any help would be great appreciated!

Charlie
