Dry in water writes:

> Arcgis, ENVI, ERDAS can read this image properly. But matlab and IDL can't read it. What I mean was the tiff image exported from those program (Arcgis etc) couldn't be read in IDL and matlab correctly.

This still doesn't totally convince me it is a TIFF file, although I suppose it could be a TIFF file with proprietary TIFF tags that are getting in the way of the "standard" TIFF reading mechanism.

I would be more convinced if you saved the file as a TIFF file from within ENVI and then tried to read *that* file in IDL.

Cheers,

David
