I never had trouble with reading tif files as long as I was sure that these were tif files. If Query\_tiff gives zero, then the file type is not a Tiff or cannot be read by IDL.

Just a guess... the support for BigTIFF files was added to IDL in Version 8.2. What version of IDL do you have?

Use

print, !version

to find out and you should get something like

{ x86\_64 Win32 Windows Microsoft Windows 8.2.1 Aug 20 2012 64 64 }

Do you know "how" the file was produced? With which command and version was it produced?

Regards,

Helder
