-3.4028234663e+038. Pixel type is float-point, 32 bit. So the number is out of range of float-point.
So how can I set null value into 0. Is there any way to do this in IDL.

IDL> help,-3.4028234663e+038
<Expression>   FLOAT   = -3.40282e+38

IDL seems to be fine with representing that number as a float. It probably will not keep all the
decimals, though.
