Subject: good mapping tutorial?
Posted by Jeremy Bailin on Tue, 11 Dec 2012 04:15:32 GMT

Dealing with the map projection routines in IDL is something I've never really had to do, but I find myself wanting to right now and I am searching in vain for a good tutorial on the basics. Can anyone point me towards something appropriate?

(in particular, what I'd like to do right now is take an all-sky image that I've managed to harangue into a Mollweide projection and write out a piece of it into a FITS file in one of the native projections that FITS files deal with... but I'm sure that I will be much the wiser if I can find a tutorial that will include more than just this)

-Jeremy.
