Subject: IDL rectangular sparse matrices
Posted by carolinebalden on Fri, 14 Dec 2012 18:31:59 GMT

Hello,

Is there anyone who has a bit of code to make sparse matrices in IDL that are rectangular? The only code that I can find is for square matrices. Other programming languages have this capability, but it seems that IDL does not!

Any leads will help before I transition to matlab or another language.

Thanks,

Caroline
