I tried to do a similar thing, but using idlrt.exe with a compiled .sav file:

```
idlrt.exe -rt=prog.sav
```

It works fine from the windows command line, but if I set it to run when I'm not at the computer, it seems to change behaviour, producing a splash screen like the virtual machine. Of course, it gets stuck, because there's no-one to click it.

Is it supposed to do this? Is there a way to run a .sav file using idl.exe?
