
Subject: IDL 7.1, OS X 10.8.2 & XQuartz 2.7.4 problem

Has anyone got IDL 7.1 working properly with Mountain Lion?
Mine works OK for plotting & grey scale colormap image display,
but for instance:

```
IDL>cursor,x,y,/data
```

does not work (hangs and waits for mouse click) and loadct does not
change colormap (whatever number I try, I always get grey scale). No
error messages.

Any ideas anyone. Upgrading to 8.1 is unfortunately not an option now,
maybe later.

Cheers, Pasi
