## Subject: IDL 7.1, OS X 10.8.2 & XQuartz 2.7.4 problem Posted by Pasi Hakala on Thu, 20 Dec 2012 10:49:20 GMT View Forum Message <> Reply to Message

Has anyone got IDL 7.1 working properly with Mountain Lion? Mine works OK for plotting & grey scale colormap image display, but for instance:

IDL>cursor,x,y,/data

does not work (hangs and waits for mouse click) and loadct does not change colormap (whatever number I try, I always get grey scale). No error messages.

Any ideas anyone. Upgrading to 8.1 is unfortunately not an option now, maybe later.

Cheers, Pasi
