Hi,

I have a string +2.64342987e+02 which I want to convert to float. Each digit is important so I don't want to lose any of them while type converting to float.

print float(+2.64342987e+02) gives 264.343

print, double(+2.64342987e+02) gives 264.34299

I want 264.342987

Can anyone help.

Rgds

Gompie
