Folks,

I was poking around last night on the ExelisVis Code Library web page and found an extremely well-written program by Fernando Santoro that implemented a Taylor Diagram using the IDL 8 function graphics routines.

Having need one of these for some time, I immediately set about converting the program to Coyote Graphics. I'm afraid I have shamelessly stolen most of Fernando's hard work. To make up for it, I have added a couple of features that I thought the original program lacked.

If you have not yet converted to IDL 8 graphics, you may be interested in this direct graphics implementation. You can read more about it here:

[http://www.idlcoyote.com/cg\\_tips/taylordiagram.php](http://www.idlcoyote.com/cg_tips/taylordiagram.php)

Cheers,

David
