I had to laugh when I got the to AlphaBGPos keyword description... I read:

"I would say 99.9 percent of the time there is absolutly no reason to use this keyword!"

and thought "Wait a minute, I use that!". Then I read the next line:

"I would probably remove it, except that the very first person besides me who use the Transparent keyword with cglImage had a requirement for it."

Got to love it when you recognize yourself in Coyote programming tips... ;-)

-Jeremy.
