The code below puts all the data in one single column (and no commas) instead of 4 comma delimited columns. In the past this has worked for me. Can somebody help with correcting the syntax to produce the 4 comma delimited columns.

```

You probably got the commas, but you had to scroll down 16595 rows to see the first one.

You could do

```
for i=0,16594 do printf,lun,date[i],',',time[i],',',rhie[i],',',cirrusp[i]
```
