> is it possible to put arrows in a 3-D plot such as an isosurface plot? If so how would I go about doing that?

I altered IDL's ARROW.PRO procedure to produce arrows on 3D plots, but it needs work still. I have tested it on several different types of plots and it works for me, but I still am not convinced that the head of the arrow will show up 100% of the time. Also, I have not tested any of the original IDL keywords to see if they work in 3D yet...

You can get the program here (temporary location).
