Hi, I'd like to put several figures in different pages in a postscript file. How to change pages? I use erase, like

```
set_plot,'ps'  
device,....  
plot,[0,1],[0,1]  
erase  
plot,[0,1],[0,1]
```

sometimes it works well, but sometimes there is wrong message:
ERASE: PostScript preview incompatible with multiple pages.
then how to do that?
