I ran the IDL routines TIME_TEST and GRAPHICS_TIMES on my new IBM clone. I've posted the results below. I am curious how the 486-66DX2 stacks up against other machines, ie VAX, SGI, SUN... ect.

The IDL documentation has results for several older machines, but I would like to see some time tests for newer machines.

If interested, try the above named routines on your machine and mail to me or post the results.

Machine / OS / Ram/cache	Comp.	Geo. Avg.	Graphics	Geo. Avg.
486DX2-33/16 VLB Windows,16M, 0k 64	1.88	10.5	2.53	
486DX2-33/16 VLB Windows,16M,256k 55	1.65	8.5	1.93	
486DX2-66/33 VLB Windows,16M, 0k 36	1.08	6.1	1.47	
486DX2-66/33 VLB Windows,16M,256k 33	0.96	5.2	1.21
