I haven't tried it but you might look at the IDL Tool for Automatic Measurement of Equivalent width (TAME)

<http://astro.snu.ac.kr/~wskang/tame/>

which is discussed in <http://arxiv.org/abs/1207.2845>

And since you want a non-interactive program, there may be less need for IDL, in which case you could look at DAOSpec (Fortran)

http://www3.cadc-ccda.hia-ihp.nrc-cnrc.gc.ca/community/STETS_ON/daospec/

or PySpecKit (Python)

<http://pyspeckit.bitbucket.org/html/sphinx/index.html>
