Subject: Check overlapping of two differen georeferenced images
Posted by titan on Mon, 04 Feb 2013 15:08:23 GMT

Hi all,
Is there a way using IDL or ENVI to check if two georeferenced images are overlapping or not?

In this way I would like to find a workaround for the envi_layer_stacking_doit routine error that I get when two images have no geographic area in common.

thanks in advance
