> I am using CGPlot to create a 6 plots in one single window. All have the same X- and Y-axes so I just need one common X-title and common Y-title covering the whole horizontal and vertical space. How should I do it? Giving xtitle='X' and ytitle='Y' in CGPlot gives titles to that particular plot only?

```
cgDisplay
positions = cgLayout([3,2], OXMargin=[8,4], OYMargin=[8,4], $
    XGap=6, YGap=5)
FOR j=0,5 DO BEGIN
    cgPlot, cgDemoData(17), Position=positions[*,j], NoErase=(j NE 0)
ENDFOR
cgText, 0.5, 0.05, /Normal, Alignment=0.5, 'This is the X Axis Title'
cgText, 0.05, 0.5, /Normal, Alignment=0.5, Orientation=90, $
    'This is the Y Axis Title'
END
```

Cheers,

David
