Hi Poonam,

Your earlier messages didn't show up on my newsreader for some reason.  
Sorry for not responding sooner.

I have a meeting tonight that starts in just a few minutes and will last a few hours. But, just glancing at this problem, it appears oploterror is turning cgWindow off! At least in my version, after I call it, my window no longer resizes or anything!

I really don't know why it would be doing that. I'll investigate and get back to you as soon as I can. I wonder if you can use cgErrPlot in the meantime?

Cheers,

David
