Subject: IF THEN ELSE Completion

Folks,

I'm getting used to the IF-THEN-ELSE statement completion in IDL 8.2.2, I guess. But I can't seem to figure out the auto-indentation algorithm. Sometimes it appears to indent 2 spaces, sometimes more than that. I have the impression it goes up to 4 spaces. It seems to behave differently in different situations. Maybe it's different between my two machines. But, anyway, something is weird about it.

Has anyone figured out how to control this? Can it be controlled? It's maddening for those of us who are neat freaks. :-(

Cheers,

David
